OBJECTIVE

Data Science & AI student and Cloud AI Engineer apprentice specializing in production multi-agent systems, computer vision, and GCP deployments. Seeking to build real-world, high-impact intelligent systems through research-driven engineering.

EDUCATION

B.Sc. Data Science & Artificial Intelligence — Hussein Technical University (HTU) 2022 – 2026 (Expected)

GPA 3.63 / 4.00 (Excellence) · Google Cloud Digital Leader — Certified

SKILLS

Technical: Python, PyTorch, TensorFlow, Google ADK (multi-agent), Vertex AI, YOLOv8, Gemini API, FastAPI, React, Firebase / Firestore, Cloud Run, Docker & CI/CD, PostgreSQL / SQL, Computer Vision, Machine & Deep Learning, JavaScript, Tailwind, HTML/CSS.

Soft: Team Leadership, Project Coordination, Innovation Problem-Solving, Technical Documentation, Adaptability.

EXPERIENCE

Cloud AI Engineer Trainee — LiverX (Google Cloud Partner) 2025 – Present

- **Built and deployed** production multi-agent AI systems on Google Cloud (ADK + Gemini, Cloud Run, Vertex AI, PostgreSQL) as sole developer, shipping client-facing solutions for enterprise and public-sector users across the MENA region.
- **Engineered a data-loss-prevention layer** (Sensitive Data Protection + Model Armor) that blocks national-ID leakage via a custom 11-digit regex infoType, protecting citizen data and keeping AI responses compliance-ready.
- **Packaged complex systems for non-technical audiences**, producing bilingual technical documentation and a branded AI-generated video suite for a flagship cloud-technology summit booth.

Co-Founder & Team Lead — Madmoon (Rocket Pitch, INJAZ) 2025

- **Co-founded** a third-party escrow FinTech for secure online transactions, placing **top 4 of 100+ teams** and securing INJAZ incubation by leading ideation, market research, and prototyping.

Volunteer Team Leader — Invent for the Planet 2025, HTU Feb 2025

- Coordinated volunteer teams across a global innovation event spanning **24 countries and 51 universities**, liaising with mentors and faculty to ensure smooth execution.

Student Volunteer & Gifted Student Support — Deanship of Student Affairs, HTU 2025 – Present

- Support student engagement and foster leadership through club, team, and event coordination while balancing academic commitments.

PROJECTS

Naqla — Real-Time Delivery & Logistics Platform (PWA)

- **Built a production Arabic-first (RTL) last-mile logistics platform** serving merchants, drivers, and admins from a single serverless Firebase codebase, delivering live order tracking across three role-gated portals.
- **Engineered an order-derived accounting engine** (settlement batches, partial-payment reconciliation, per-merchant tariffs) plus SLA-based returns tracking with automated overdue flagging and a full audit trail.

Multi-Agent Procurement / RFP System

- **Engineered a hierarchical multi-agent system** (1 director + 5 sub-agents) on Google ADK that automates the end-to-end procurement lifecycle for enterprise and public-sector bid teams, backed by a ~64-endpoint FastAPI service on Cloud Run + PostgreSQL with print-ready bilingual (EN/AR) PDF generation.

Civic-Issue Reporting Platform

- **Built a bilingual (EN/AR RTL) platform** letting residents report and track municipal problems, cutting duplicate submissions via YOLOv8 image detection (Vertex AI) and Haversine geolocation matching. Built on React + FastAPI + Google ADK, deployed to Cloud Run.

Automotive Image Classification — Computer Vision

- **Built a CNN-based computer-vision model** to classify vehicle types from images, trained with PyTorch / TensorFlow using data preprocessing and augmentation, and improved robustness through iterative error analysis and optimization.

Web Development & Portfolio

- **Designed and shipped a Flask portfolio web app** with a custom motion system (particle canvas, scroll-driven reveals, magnetic UI) and contributed scroll-triggered video transitions to a company website — with many more projects showcased in the [portfolio](#).

ACHIEVEMENTS

- **4th of 100+ teams** — Rocket Pitch Startup Competition (2025); secured INJAZ incubation for Madmoon.
- Leadership recognition — Invent for the Planet 2025 (global, 24 countries).
- Google Cloud Digital Leader — Certified (2026).
